

# Hosted File Server

Manage, share and backup your data seamlessly and automatically with Nuage Hosted File Server. You and your colleagues can access your company data from anywhere; via the web interface whenever you have access to the internet; offline via your local copy when you don't.

And most importantly, you **never** lose control of your data.

## What are the benefits?

Nuage hosted File Server gives you your own data and file repository, without the headache and cost of managing it in-house. Pay only for what you need and seamlessly add more users and storage space as you grow; there's no limit to the number of users or the amount of space you can add.

Automatic synchronization when you are connected to the internet between the hosted copies and your local copies of data.

Automatic backup of the data on the Hosted File Server for added assurance.

## How Does It Work?

- You are not tied to a central location to receive these services.
- Upload information to your Hosted File Server, and keep local copies of some or all of the information on your PC or laptop if you wish.
- Data is automatically synchronized between local and hosted copies.
- Access it as you would any other folder or file on your laptop or PC.
- Control who is allowed to access the folder and the sub-folder and files.
- Easily revert back to a previous version.
- Continue working with your local copy when you are not connected to the internet.
- Access your data using the web interface if you don't have access to your own laptop or PC.
- We can help you easily migrate from your existing system.

✓ Increased reliability

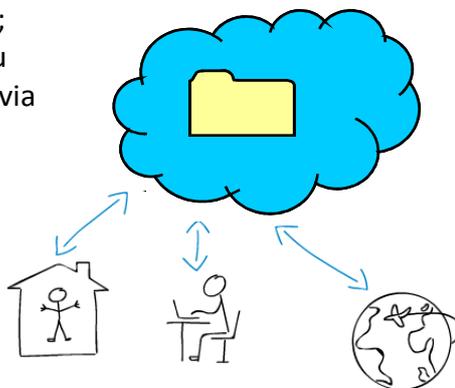

✓ Increased security

✓ Increased flexibility

✓ Less cost

✓ Less hassle

✓ Never lose your data
