

Online Storage and Backup Datasheet

Online storage and backup provides a highly secure, automated and central place to store, share and protect your critical business data. It offers a cost-effective, hassle-free way of creating an online file and data repository, which is accessible by all employees.

There's no need to invest in servers, software or infrastructure. Online and offline modes ensure that employees can access data even when they're not connected to the internet.

Web access enables access to your data anywhere from any PC, Mac, or net book which has a browser and internet connection.

Is your business data safe?

The business data that resides on your computer and server infrastructure is your most valuable asset, and it demands adequate protection. Without a 100% secure backup of this data, your business will be highly vulnerable when faced with situations such as theft, fire, flooding, virus, power cuts or technical malfunctions. Under circumstances like this, an up-to-date backup will be essential to your business continuity. Losing even a week's worth of data can be devastating to any business, leading to losses of hundreds or even thousands of pounds.

Secure offsite data storage and management is replacing the traditional idea of keeping your data on your own hard-drives. There's no need to worry about data backup or disaster recovery, as this is all taken care of. You can connect from anywhere via the internet – at home, abroad or in the office. All you need is a PC, laptop, thin client or mobile device and an internet connection. A cache mode means you can access data offline. Synchronisation is carried out whenever an internet connection is available.

Business benefits

Online storage and backup brings a number of benefits, helping you to gain that vital competitive edge.

Simple and automatic

Once you created your online accounts, you can set access controls to allow restricted access to employees based on privileges. You do this by creating shared folders or Team spaces and granting access where appropriate. Or you can choose to pair folders in your C: drive with folders you create in your online storage space. Upload your data to the online account and it's available to whichever employee or you wish to grant access to.

Easy Access

The optional and free downloadable Nuage Storage Client software links your computer to your online account. It creates a virtual drive on your PC that mirrors the view online. By using cache mode for some or all of the files you can keep some or all of your data on your computer for occasions when you are not connected to the internet. The synchronisation process runs in the background and after the initial upload, only changes to documents are made, minimising the amount of data transferred.

Safe and secure

Though some may have understandable concerns about a third party holding their most valuable data, in reality online backups are very secure. Your backup is stored in a professionally monitored storage environment with redundant power and connection.

Password protected access ensures only authorised users can access your data. Online backup solutions like ours are now acknowledged as being the most secure way to backup your data.

Unlimited space

With single user accounts you get a 100GB space to store files, data, even photo's and music. You can increase this at any time.

Business users (minimum of 2 users) each get 50GB of pooled storage space; so 3 users get 150GB, etc. The business user package enables the creation of shared Team spaces. You can increase the amount of storage space at any time.

Single store of data and Version Control

Instead of having multiple versions of files on different computers in your organisation, or emailing documents to each other, you can all access a single master copy of your data.

The system keeps track of changes made to documents and lets you open previous versions.

Changes made by one person, once they are synchronised online are then available to everyone else who has access to it. The amended version becomes the latest version.

If a file or document has been opened by someone else you can open the same document in read mode. If you also make changes to the document you need to rename it before you can save your changes. In this way it prevents you from overwriting amendments by your colleague.

Business Continuity

You can work from anywhere. If your computer fails you don't lose your important data. You don't need to worry about tape backups or offsite storage, that's all taken care of.

Advantages

- Minimised downtime in case of data loss - restores are fast and easy
- Version Control allowing earlier work to be recovered
- Online and Offline modes to computer
- Efficient synchronisation runs in the background
- Web Access portal in case you don't have your computer with you and you need to access or amend a document
- You can amend documents online with the award winning ZOHOO online office suite

Access your data anytime, anywhere

Flexibility is a quality that can pay dividends internally too. Many businesses are now increasing productivity and gaining valuable loyalty by providing flexible working arrangements, including working from home. Home workers can gain access to their working environment, network and applications instantly, without the need for expensive VPNs or providing everyone with laptops. Instead, hosted desktops make the 'anywhere' office a reality.

More cost-effective

Reduce operational and capital costs. No initial outlay is required for the purchase of new equipment. There are no ongoing media costs or staff costs, running costs are limited to paying a monthly fee. Add to this the clear advantages of online backup, such as security and automation, and the cost advantages of online backup become clear.

About Us

Nuage provides a range of IT support to sole traders and SME's.

Our approach is to understand our clients' needs and recommend products and solutions which fit their business needs and aspirations.

Our aim is to make IT invisible to you so you can get on with running your business.
